

Rolta Battlefield Management System – for the Cutting Edge of the Sword !

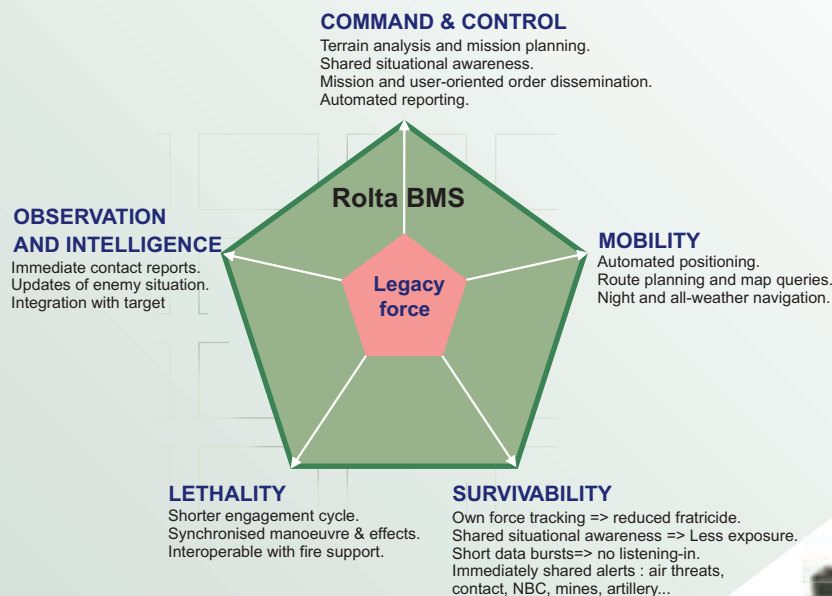

- **Scalable** - Infantry Battalion HQ down to individual soldier level
- Shared **Situational Awareness** for Synchronized Manoeuvre
- Quick and Simple **Data Exchange** for Combat Units
- Collaborative **all weather operations** by day or night
- **Integrated Platform Management** (Weapon Systems, Communications)
- **Integration** of all the **battalion sensors**
- Tactical **C2 Functionalities**: Planning, 2D/3D Analysis, Status Report- As per work flows
- **Mission Planning** Services
- **Overlay** Management
- Automated **messages and warnings** (NBC, Enemy Contact, Air Threat, Artillery, Minefields...)
- Fully **interoperable** with the Army chain of command
- **Management** of low-bandwidth **tactical networks** and dual bandwidth radios for **triple play services**- voice, data, and video
- Enables **improved coordination** and **increase in the tempo of 'ops'**
- Caters for **replay & after action review (AAR)**

Indian military symbology, preformatted messages, data replication, mapping studio for pre-processing of different map formats, standard Indian map data (Raster, Vector & Elevation maps), **Military grade** or commercial type **security** applications.

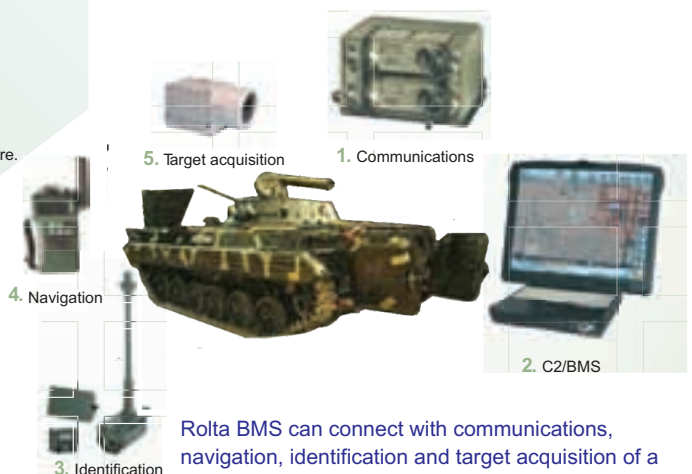

Interoperability flows from a common tactical display and standardised graphical overlays based on a common data model. Hardware can be tailored to match integration, operational or environmental constraints.

Rolta BMS delivers all the benefits of a Battlefield Management System with the reliability and flexibility of smooth C4I integration at the lowest tactical levels, from deployed Battalion / Combat Group HQ to the fighting soldiers, gun tank / ICV.

Management of legacy combat net radios and connection with a tactical internet service provider ensures connectivity in all combat situations and can deliver higher quality of service to best-placed users.

Rolta BMS can connect with communications, navigation, identification and target acquisition of a digitised combat vehicle.
